Art Unit: 2138

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-14 and 19-23 are rejected under 35 U.S.C. 102(e) as being anticipated by Quayle et al (6,694,464).

As per claims 10-11, Quayle et al disclose an apparatus, comprising:

A mean for dividing pins of an integrated circuit into a first group and a second group;

A means for logically associating each pin of the first group to each pin of the second group; and

A means for generating a scan chain in the integrated circuit for each logical association of pins. (See Fig. 11, col. 4, lines 54-65 and col. 17, lines 42-67 to col. 18, lines 1-25).

Art Unit: 2138

As per claim 12, Quayle et al further disclose, wherein the first group has n numbers of pins (1804 PINS), the second group has m number of pins (1868 PINS), and the logical association of pins drives $n*m$ scan chains. (See Fig. 11).

As per claims 13-14, Quayle et al further disclose wherein the means for logically associating comprises:

A means for performing a exclusive OR operation (col. 47, lines 14-49).

As per claims 1-5 and 6-9, these method claims are rejected under similar rationale as set forth in system claims 10-14.

As per claims 19-23, these claims are rejected under similar rationale as set forth in claims 10-14.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 15-18 and 24-27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Quayle et al (6,694,464).

As per claims 15 and 18, Quayle et al disclose an apparatus, comprising:

A mean for dividing pins of an integrated circuit into a first group and a second group;

A means for logically associating each pin of the first group to each pin of the second group; and

A means for generating a scan chain in the integrated circuit for each logical association of pins. (See Fig. 11, col. 4, lines 54-65 and col. 17, lines 42-67 to col. 18, lines 1-25). Quayle et al do not disclose that the logically associating the pins of each group through an ExOR matrix and the ExOR matrix has n dimensions. However, it would have been obvious to a person of ordinary skill in the art, at the time the invention was made, to modify the logically associating the pins of Group I and Group II through an ExOR of Quayle et al into an ExOR matrix so that the pins of the first and second Groups can be logically associating through an ExOR matrix in n dimensional of the pins in Group I and Group II as needed.

As per claims 16-17, Quayle et al further disclose a means for generating logical associations (Fig. 11).

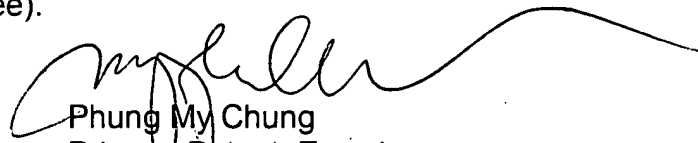

As per claims 24-27, these claims are rejected under the similar rationale as set forth in claims 15-18.

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phung My Chung whose telephone number is 571-272-3818. The examiner can normally be reached on Monday to Friday.
